# Australia

1. **Study the climatic map and answer the question:**

Where do you think most of the inhabitants live and why? **In the south-east part because the climate is the most suitable for living – without extremes.**

What climatic type covers most of the area? Do you think it is densely populated? Why/why not? **Desert, the density is very low, about 0.5 person per square kilometer. The climate is very hot and dry with low temperatures during the night, water is difficult to get.**

Can you remember what is typical for tropical climatic type? **They have two seasons – hot + dry and milder + wet. In the dry season it is similar to desert, in the wet one the vegetation grows rapidly.**

2. When going to Australia, you can meet a lot of unusual animals that do not live anywhere else. Can you match the pictures with their names?

Obrázek 1 kangaroo

Obrázek 2 koala

Obrázek 3 wombat

Obrázek 4 dingo

3. There is a piece of information about each of the animals, match them to them:

- A) They are large predators, they can be potentially dangerous to humans, important part of Australian ecosystem. = **dingo**
- B) They have an extraordinarily slow metabolism, taking around 8 to 14 days to complete digestion, which aids their survival in arid conditions. = **wombat**
- C) They live almost entirely on eucalypt leaves. = **koala**
- D) It is a marsupial, a national symbol of Australia. = **kangaroo**
