Výukový materiál v rámci projektu OPVK 1.5 Peníze středním školám

Číslo projektu: CZ.1.07/1.5.00/34.0883
Název projektu: Rozvoj vzdělanosti
Číslo šablony: III/2
Datum vytvoření: 5. 2. 2013
Autor: Mgr. Marek Czerný
Určeno pro předmět: Anglický jazyk
Tematická oblast: Reálie
Obor vzdělání: Podnikání 64-41-L/51 (2. ročník)

Název výukového materiálu: Australian Flora and Fauna – učební materiál s úkoly

Popis využití: Výukový materiál s úkoly pro žáky s využitím dataprojektoru, notebooku
Čas: 15 minut

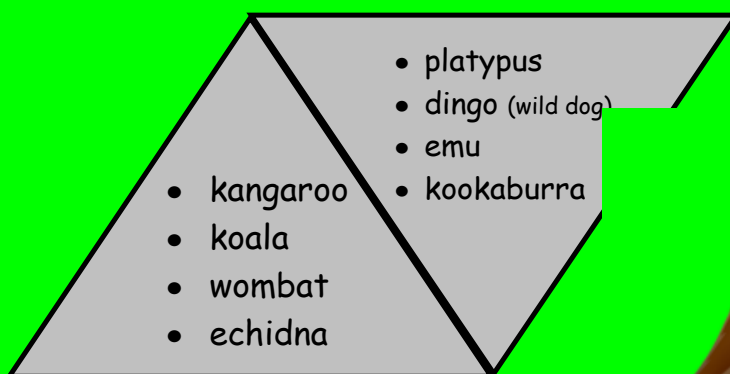

What do you know about Australian fauna and flora?

The isolated geographical position of Australia had great influence on its fauna and flora.

That is why many animals and plants developed differently from those on other continents.

Australia is a land of birds and animals which can not be found anywhere else in the world.

Australia's endemic animals and birds are:

Kangaroo

The kangaroo is the largest marsupial in the world.
An animal carries babies in the pouch for 8 months. It can weigh 85 kilograms.

Why a "kangaroo"?

When European explorers first saw these strange animals they asked a native Australian Aborigine about their name. He answered "kangaroo" to say "I don't understand your question".

The explorers thought this was the animal's name. That is how the kangaroo got its name.

Koala

The koala is a small bear-like animal which lives in the eucalyptus trees. Most of its time the koala spends in these trees sleeping. They eat only some kinds of eucalyptus trees that grow in Australia.

The name "koala" is the Aboriginal name for "no water".

Koala has a black nose and thick furry coat. It can weigh 10 kilograms. Though it looks very funny it has very sharp teeth and very sharp claws. The koala's nickname is a "native bear". Many people think that koala is a bear but it is related to the kangaroo and the wombat.

Egg-laying mammals

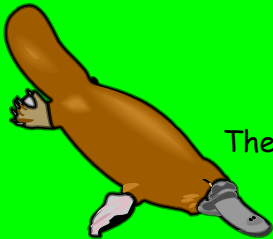

(The echidna and the platypus are the only two egg-laying mammals in the world.)

echidna

platypus

The echidna is a toothless ant-eater and is an egg-laying mammal.

The platypus is a small animal with a beak of a duck and it also lays eggs.

The emu is the most interesting bird in Australia.
It is big and can't fly.

The emu and the kangaroo are represented
on the Australian coat-of-arms.

Other animals

Tasmanian

5

Kookaburra

3

Wombat

4

The rabbit and all the domestic animals were introduced into Australia by the settlers less than two hundred years ago.

The Great Barrier Reef is a unique phenomenon of nature of Australia. It stretches about 2000 km. There are more than 350 species of corals, which make the Great Barrier Reef one of the natural wonders of the world.

Hi!

I'm Kenny, the Koala from Australia.

Remember, I am not a bear. I haven't got a big body.

I'm soft and grey but my belly is white. I have got big fluffy ears and a large nose.

It helps me sniff out my favourite food. My tail is very small.

My hands have got two thumbs, three fingers and sharp claws.

They help me climb trees. I eat eucalyptus leaves. They are very juicy and tasty.

I'm lazy. I sleep 20 hours a day. Baby koalas live in a pouch and drink milk.

eucalyptus tree

Do you remember?

1. Koala is a bear. YES/NO
2. Koalas live in Australia. YES/NO
3. Koala's belly is white. YES/NO
4. Koalas have got big ears. YES/NO
5. Koalas haven't got a tail. YES/NO
6. Koalas like eucalyptus leaves. YES/NO
7. Koalas like to sleep. YES/NO
8. Koala can't climb trees. YES/NO
9. Baby koalas like milk. YES/NO
10. Eucalyptus leaves are juicy. YES/NO
